

ROHLEDER

DIE HITEX[®] MANUFAKTUR

Reasons why you can rest assured with our products – Rohleder's dedication to environmental sustainability

Rohleder is committed to careful handling of the earth's resources. Our aim is the conservation of an intact ecosystem. This does not only require us to be considerate of minimal energy consumption, but also to always show the highest possible consideration for air, environment and climate during production. We have been most conscious in setting high standards for an ecologically responsible manufacturing process. These standards apply to us, as well as, our suppliers. We, furthermore, support ecological friendliness by choosing natural materials on the one hand and synthetic fibres on the other.

We strictly monitor the compliance with our environmental code. Only through our total commitment can we ensure a proactive and sustainable contribution towards conservation of the environment and the climate.

Requirements for the Manufacturing Process:

· **Water Pollution Control:**

Our modern finishing processes reduce the normal use of water by 30 – 40 %.

· **Avoidance of Harmful Emissions:**

Our finishing equipment is fitted with an air scrubber preventing emission of harmful substances into the atmosphere.

· **Energy Efficiency:**

In manufacturing we try to minimise energy consumption by using up-to-date insulation in our buildings and by continually optimising our production processes.
